GEODE IS A SCALABLE & CONFIGURABLE GIS-TOOLSET

GEODE[®] break open your data

Geode[®] is a dynamic web-based toolset for sharing GIS data throughout your organization. Geode is available as a hosted software service, or as an installed enterprise

software. It is configurable and highly scalable for integrating map data and analysis tools with other non-GIS data sources. Share your geospatial data so users can visualize, explore and make decisions in new ways. Geode extends the power of ESRI ArcGIS Server for rapidly provisioning and customizing of your GIS data in a web interface.

Modules for pipeline routing, asset tracking, risk assessment and geoprocessing allow your users to make decisions without expensive desktop software. Geode is highly configurable, allowing you to quickly setup and customize multiple GIS websites through a robust administrative interface.

Combine ArcGIS Server map services, imagery services, and geoprocessing models in the web browser. Configure new GIS websites using your data for your organization in minutes, without having to modify the map service or data.

Geode is more than a map viewer. It combines maps, geospatial and traditional data with analytical tools, empowering your users to **break open your data and see what's inside.**

- Highly configurable web GIS solution for the energy and pipeline industry.
- Extend ESRI ArcGIS Server by rapidly provisioning your GIS data online.
- Intuitive map interfaces for tablets and PCs.
- Combine maps, geospatial data and traditional data.
- Pipeline routing with EAI Smart-footprint toolset.
- Asset tracking integration with Globalstar satellite devices
- Execute geoprocessing models.
- Combine multiple ArcGIS Server services and image services.
- Quickly create multiple GIS websites for your organization without calling IT.
- Define your map services, layers, fields, basemaps, user access, imagery and more.
- Control users with role based security model.
- Export map to PDF.
- Search features and data.
- Customize with reports and dashboards.
