Colorado Disadvantaged Business Enterprise (DBE)

Tierra Plan provides custom GIS solutions focused on data driven web maps. We help organizations answer questions and solve problems by seeing their data in ways that are quickly understood and easily shared—on a map. Our specialties include web and mobile interface development, geodatabase development, data integration, system architecture, Esri system implementation, advanced spatial analysis, and hosting services.

Our staff is a select group of highly educated and experienced experts specialize in creating geospatial solutions. Our people are exceptional: Tierra Plan's geo-scientists uniquely bridge the gaps between GIS analysts, application developers, IT, geographers, and decision makers. We help clients efficiently integrate their non-spatial systems with their GIS data, turning maps into data access tools.

Developing useful web GIS applications involves much more than plugging data into an out-of-the-box mapping platform. We design thoughtful user interfaces based on clients' workflows and requirements. But not all our projects are focused on front-end interfaces. For many organizations, we silently provide the back-end GIS systems that power their public-facing web maps.

Tierra Plan is an Esri business partner. As such we can implement GIS solutions using Esri programming APIs and the Esri platform including ArcGIS Server, ArcGIS Online, and desktop. Our expertise in integrating databases with web maps further sets us apart. We create hybrid solutions leveraging database technologies like SQL Server spatial, Oracle, and PostGIS, with mapping platforms from Esri, Leaflet, Open Layers, Google and more. Our goal is to create solutions that best meet the needs of each individual client.

We offer hosting services for geospatial websites, databases, and web services in our Tier 1 data center in Denver, Colorado.

Services and Skills

- Custom GIS application development
- Geodatabase development
- Data integration with GIS
- GIS architecture & enterprise implementation
- Esri platform implementation including ArcGIS Server, Online, & Portal
- Real time asset tracking
- Spatial analysis & modeling
- Interface design
- Hosting services
- Geode®, our web based GIS platform as a SaaS or onsite deployment

Industry Sectors

- Agriculture
- Defense
- Economic Development
- Education
- Energy & Pipeline
- Environmental
- Transportation
